Materials and tools used for making a bottle fan

Before we started, the team list the materials and tools needed to complete the project, and where collected in one place.

Empty Bottles of water

Two empty bottles

One for erecting the fan and other for making the propeller and switch holder

Seal Tape and Marker Pen

Seal tape was used for sealing anything on

the bottle and empty or open wire Marker pen was used for drawing.

Wire

For continuity or Connections

Supper-glue

Gluing anything on the bottle

Battery

To provide power energy for the fan

Scrapping Wire

For scrapping the soldering gun

Soldering Wire

Help in connection, for sealing wire on the switch

Cutter

For cutting wires and bottle

Scissor

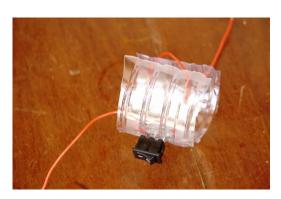

For cutting bottle and some wires

Soldering Gun

For soldering the wire on the switch

Switch

For switching on and off the fan
